

Ecosorb® 810 Pellets are EVA plastic infused with a broad-spectrum odor eliminating oil based on natural plant oils. Ecosorb 810 pellets are primarily designed for use in the thermoplastics industry to give a solid-state additive approach to applying the Ecosorb odor control technology. The Ecosorb 810 Pellets will work to neutralize the malodor compounds by reacting with them in both the liquid and gaseous phases depending on the conditions of the plastic extrusion.

Beyond the plastics industry, the Ecosorb 810 Pellets can be used on their own to defuse the Ecosorb 800 series odor control into an air space overtime.

FEATURES

- Broad spectrum odor control
- Solid Material

BENEFITS

- Treats variety of malodors
- Easy to apply to thermoplastic mix

HOW TO USE

FOR THERMOPLASTICS

Add the Ecosorb 810 Pellets into the mixing hopper and stir to gain an even mixture to your plastic mix. The quantity of Ecosorb 810 pellets will vary per batch will vary depending on the degree and nature of your odors. We recommend starting with 0.05% by weight (5 lbs in a 10,000 lbs batch) of Ecosorb 810 Pellets and increasing as needed to meet your odor control needs.

FOR AIR SPACE

Place a small quantity of pellets into an open top container or mesh bag and place where air flow will pass over the pellets. The pellets will release odor control vapor over several days/weeks.

PHYSICAL PROPERTIES

EVA Grade:	28% VA
Specific gravity:	~0.92-0.97

PART NUMBER/PACKAGING

810-Pellets-5GAL – 5 Gallon Pail of Pellets (sold in minimum quantities of 5 pails)

810-Pellets-55GAL – 55 Gallon Drum of Pellets

STORAGE

Store in a sealed container at a temperature between 40- and 85-degrees Fahrenheit. See SDS for more information.
